Xcluder Fill Fabric

Xcluder is the latest tool to guarantee the prevention of mouse, rat, bats and insects from invading any building.

Xcluder stops rodents and pests from sneaking into those cracks that leave homes and offices vulnerable. What makes Xcluder ideal for when a hole is too difficult to be sealed is that it can be stuffed into any size hole, gap or crevice, and can be cut into any shape using scissors.

Because it's rust-proof, shrink-proof and chew-proof, Xcluder is a permanent solution. For the best fit in a crevice, wildlife management professionals (WMPs) can take advantage of its ability to spring back. Simply cut a piece of Xcluder two- to three-times the size of the hole — and because of its elasticity Xcluder can be jammed into any hole — making it impossible to pass through for those wandering rodents.

Xcluder is made from a blend of coarse stainless steel and poly fibers, making this product extremely resilient and an impassable wall for those unwanted rodents and pests.

This is an environment friendly product, and has no chemicals. The USDA Research Center has worked with Xcluder and says it has proven to get the job done.

Available in rolls measuring four inches by 10 foot, as well as one inch by four foot rolls, this is a flexible product that will fit many applications. **WMP**
