

Xcluder™ Pest Control Block Caps

Easy to Install Rodent Protection for Concrete/Cinder Block Walls

**Ideal for: Food Processing Facilities • Storage and Warehouse Facilities • Food Distribution Centers
Grocery Stores • Pet Stores • Supercenters • Hi-Rise office and apartment buildings • Schools and Garages
• Any location that contains concrete block walls and requires pest management**

Rats and mice invade all styles of commercial buildings and then nest inside of the building's concrete hollow block walls (i.e. cinder blocks or Concrete Masonry Units (CMUs)). These walls offer rodents near-perfect places for nesting, and also provide completely protected travel paths hidden from humans and/or pets.

Xcluder™ Block Caps help to permanently eliminate wall-invading rodents from living in cinder block walls because they are designed to cover the most common openings where rodents gain entry.

Xcluder™ Block Caps are easy to install. No tools are required. Once in place, Xcluder™ Block Caps also offer energy conservation benefits similar to, or exceeding, other conventional cinder block wall "cappings."

Overview of Cinder Block

For complete protection of the entire facility, we also recommend Xcluder™ Door Bottom Seals and Xcluder™ Pest Control Door Sweeps for all dock and external access doors.

Features

- Fits most common concrete building blocks
- Perfect for new and existing construction
- Fraction of the cost of cement filling / finishing work
- Will not rust
- Provides energy conservation benefits similar to or exceeding other cinder block wall "cappings"
- Stamped inset and overlapping size for quick and easy placement.

Specifications

- Made of tin plated steel
- Each cover is 6" x 8"
- Packed 50 to a box to facilitate fast and efficient installation by contractors, maintenance personnel, or pest management specialists.

Xcluder™ Pest Control Block Caps

Easy to Install Rodent Protection for Concrete/Cinder Block Walls

Item	Description
162910	Xcluder™ Pest Control Block Caps - 50/pkg.

Installation Instructions -

No tools necessary for installation. We recommend using ordinary work gloves for handling the plated steel (edges can be sharp), and a quality landscape adhesive that is approved for use on block, stone, and timber construction (Titebond® PROvantage Landscape Adhesive, Loctite® PL® 500 Landscape Adhesive, or equivalent).

To install—

1. Place one bead of the adhesive at each corner of the first hole (See A above)
2. Place block cap so that the short end (B) of the cap goes towards the center of the brick and the longer/extended portion goes towards the next brick. The extended portion (C) is designed to cover the opening that is made when two bricks meet.

Two caps will be used for each block, the short ends will meet in the center, the long ends will extend towards the neighboring block. In some cases the block caps will overlap.

Four drops of adhesive is enough to permanently secure the Xcluder™ Block Caps into place.
